New Feature

Key Contacts Management

You can now add a selected contact to multiple Key Contact lists quickly and easily as follows.

1. Select the contacts icon on the CAM+ main menu
2. Select ***Manage Alarm contacts*** and on the following page ***Allocate Contact Names***
3. The Sensor Alarm Group page displays all the Sensor Alarm Groups set up for your business – typically one for each of your major departments / org. units. Click on the Contact Lists icon for the group you in which you want to add/modify contacts
4. The Contact Lists for the selected Group are listed: select the Contact Lists icon in the View column on any line
5. Click on the ***View Available Alarm Contacts*** icon in the bottom let area of the page.
   The Contacts Allocation page displays – here is an example:

   Select the list or lists to which you would like to add a contact using the selection boxes at the far right of the list names. Then, in the INACTIVE ALRM CONTACTS box, click the arow icon to the right of the contact you want to add to list/lists. The contact is added to all the lists selected and shown in ACTIVE ALARM CONTACTS box. Adjust their position in the list (which determines if they are the first to be contacted or the second etc.) using the up and down arrows in the left column.

6. To complete your update, select the **Update** button at the top of the page.

Note: warning messages are now displayed when invalid entries are made in mandatory fields (telephone no., email etc.) on the Alarm Contact Allocation page to ensure contact records have the required information.

Event Driven Actions and Contact Lists

If you are using our Event Driven Actions (EDA) service to have Alerts and Alarms accompanied by checklists guiding staff to resolve the alert/alarm issue, this service can now work with your Contact Lists. If the staff/teams that receive EDA alerts/alarms on their mobile phones/Checkit Memos are not available during the night, for example, we can enable EDA on a Contact List that includes contacts that are available through the night and they will be contacted by Checkit through phone, mail or SMS, in the usual way.

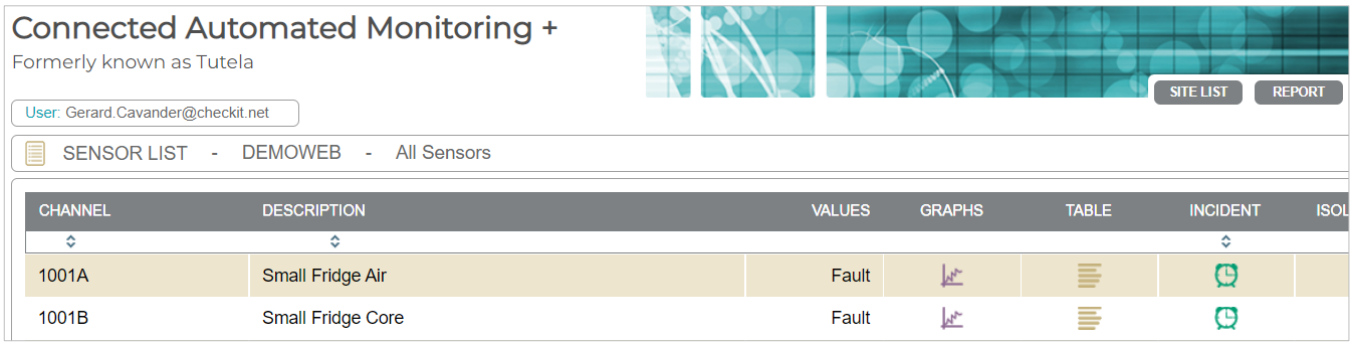
When a Contact List is enabled for EDA a new EDA column on the Allocate Contact Names page indicates if EDA is enabled or not. To enable a Contact Lists for EDA please contacts Checkit Customer Services.

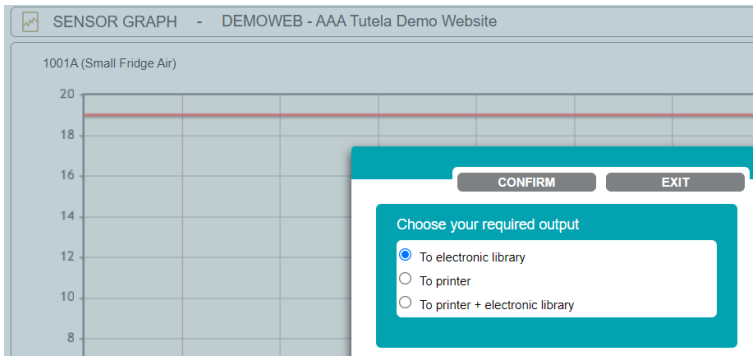
Improvements/Enhancements

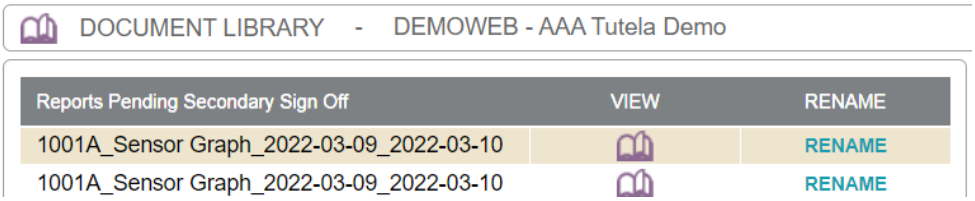
1. Report Names Improved

The names assigned to reports you create in the CAM+ website and store in the online Document Library now include both the name of the channel/sensors they relate to and the date range they cover. Previously, the automatically generated name included only the type of report ('Sensor graph' for example) and the date the report was generated.

For example, if you generate a graphical report by clicking on the graph icon on the Sensor List page, use the Reports button to generate a report and select the Online Document Library as the place to store it, the name given to the stored report will begin with the reported channel/sensor name (1001A in the example below) and end with the date range reported.







2. Search Filters on the User Status Page

Finding either a particular user record or a particular division record is now much easier. Two new fields have been added to the User Status page. *Username Filter List* is available to Administrators, while Website Administrators also have access to it as well as to *Division Name Filter List*. In both cases entering a string in the filter field searches user records and displays only matching records.

Bug Fixes

Sign-off Field Enabled

Due to a bug the Supervisory Sign-off and other fields were disabled/read-only whenever the Incident Audit page was opened by clicking on an incident displayed on a Sensor Graph page (only). This has been fixed so these fields will be updateable as expected when the Incident Audit page is opened in this way – the "Edit" button enabled.
